WITH AN ADDITIONAL, LARGER BLOW MOLDER:****THE ADDITIONAL MACHINE HELPS DUTCHLAND DELIVER
ON STRATEGIC PLAN**

JANUARY 4, 2012 – Oostburg, WI – Dutchland Plastics has announced it is increasing its ability to service customers by adding an additional Blow Molding machine. The additional, large blow molding machine will allow Dutchland to service existing customers more efficiently while broadening its overall customer base.

“The additional Blow Molder enables us to apply Dutchland’s level of quality to a growing market that has the need for larger parts,” said Mike DeHaai, Dutchland’s Vice President of Operations. “We will now have the ability to increase both efficiency and output of plastic in each cycle. By investing in this machine, we are investing in our customers and delivering on our strategic plan.”

The target for the additional blow molding machine to be up and running is the end of January.

Dutchland Plastics is a leading custom manufacturer of rotational and blow molded plastic products. Founded in 1967, today Dutchland Plastics provides product and services around the world. Dutchland Plastics is a private, family-owned business that is in its second generation of ownership.
